

# Environment Setup to Practice with Bash Shell Scripting

NarendraP

Learn How to Automate Common Tasks with **Bash** Shell Scripting

# Environment Setup

- We need any Unix/Linux (RHEL, Centos, AIX, Ubuntu...) System for practice.
- We can get required Unix/Linux System:
  - From any Cloud
  - From VMware
  - Directly Install Unix/Linux OS on your PC/Laptop
  - Windows Subsystem for Linux
- Here I am using: AWS Cloud Ubuntu Linux System to Practice with Bash Shell Scripting.
- Reason to go with Ubuntu Linux System is:
  - We need mail setup to create scripts to get Mail Alerts.
  - It is very easy to setup Gmail service on Ubuntu server.
- I am using Git Bash terminal to connect my Ubuntu Server.
- **Note:** We will work with different OS's while Practicing with bash shell scripts.

Learn How to Automate Common Tasks with **Bash** Shell Scripting

**Thank you**
