Make Bash Shell Scripts as Portable with Unix/Linux Systems

- What is a Shebang line ?
 - Shebang line means: which shell we are using to execute our shell scripts.
- Suppose in our case it is bash shell and we are using shebang as `#!/bin/bash`
- So, we can make our bash shell scripts as portable using:
 - **`#!/usr/bin/env bash`**

Learn How to Automate Common Tasks with **Bash** Shell Scripting

Thank you

What is **`#!/usr/bin/env bash`** ?

(Difference between **`#!/usr/bin/env bash`** and **`#!/bin/bash`** or **`#!/usr/bin/bash`**)
